## WIRELESS REMOTE SURVEILLANCE KIT

The Wireless Remote Surveillance Kit is an excellent solution for remote surveillance needs. With HD quality video, the ability to view a large area, reliable solid state storage, and remote functionality, this solution is ideal for commercial or industrial sites in need of remote surveillance.

The kit is designed as a single unit, fully integrated with local recording capability and wireless communications for live remote viewing and monitoring. Incorporating the Axis P5534-E camera, the system has pan-tilt-zoom capabilities, making it ideal for a large area. This camera can also be setup to operate on a patrol of preset positions at certain times of day (schedule) to observe a greater portion of the area under surveillance. Additionally, the camera is also outdoor-ready, allowing the wireless remote surveillance kit to be adaptable to variety of environments.

The solution also provides convenience for its users beyond the high-quality video, customizable capabilities, and durable nature. The powerful internal processor of the Axis P5534-E allows for a user friendly video management experience. The camera's processor supports the Axis Camera Application Platform, enabling the camera to run the Exacq Technologies Exacqvision Edge network video management server software directly on the camera. The Exacqvision software is the same NVMS software recommended for high and medium security locations, making it

easy for users to operate the Remote Surveillance Kit.

Though this kit is remote, it is still capable of storing large amounts of video footage and providing access to the stored video conveniently. The Remote Surveillance Kit is equipped with a 64GB SD flash card for local archive storage that provides approximately 2 weeks of video storage. Incorporating the flash card for large video storage along with the Exacqvision Edge network video management server software offers the users additional capabilities when reviewing video footage. The camera views can be presented side by side with the client application of your choice - PC, Mac, or Linux.

Further adding to the convenience of this solution is the compact router incorporated in the kit. The Cradlepoint IBR 600 wireless broadband router/modem is a 4G/LTE device that connects users to the stored video on the Remote Surveillance Kit's flash card. This communications device provides live remote access and local Wi-Fi access for setup of the system or downloading of large amounts of recorded video for added user convenience.

This solution can easily be placed in any area, existing or under construction, where AC power is available, and provide quality, reliable surveillance video. The Remote Surveillance Kit can be bolted or strapped to a utility pole and is designed for easy installation and

removal. Additionally, this solution is programmed and tested during assembly so that the installer only needs to mount the device and plug in the outdoor power cord to an AC power source. The Remote Surveillance Kit's versatile features create a solution that is both convenient and reliable.

- **HDTV-quality Video**
- **Ample Video Storage**
- **Ideal for Large Area**
- **User-Friendly Video Management System**
- **Easy Installation**
- **Customizable Capabilities**
- **Durable & Outdoor-Ready**
- **Live Remote Access to System**

## ABOUT CVSI

### Our Company

Carolina Video Security, Inc (CVSI) provides, installs and maintains commercial and industrial physical security systems aimed at preventing intrusion through advanced surveillance and access control. CVSI also develops specialized law enforcement solutions for interview recording, video arraignment and in-field forensic video capture. We solve challenging design, environmental and networking requirements and employ the most advanced -- proven and reliable -- technologies to help protect your employees, facilities and operations. We are experts in IP networking, wireless communications, information and physical security technology. Our staff has years of experience in video technology and wireless communications.

### Our Solutions

- Commercial and Industrial Video Surveillance
- Access Control
- Intrusion Detection and Burglar Alarm Systems
- Video Conferencing Systems
- Interview Recording Systems
- Wireless Infrastructure
- Security Power Systems / Solar
- Emergency Notification Systems

### Our Services

- Physical Site Security Consulting
- System Planning, Design and Implementation Professional Services
- 24/7 Alarm and System Monitoring
